

Computing at Sharps Copse Primary School

A good computing education helps children learn how to think carefully, solve problems, and use their imagination to make new things. Computing is linked to subjects like maths, science, music, and design and technology. Computing helps us understand both the real world and the digital world.

In computing lessons, children learn how computers and digital devices work, how information is stored, and how to write simple programs. With these skills, they can create their own designs, games, and digital projects.

Computing also teaches children how to use technology safely and confidently. It helps them share ideas, make digital content, and join in with the digital world as responsible and creative users
